

DID THE 2019 SEASON **REWRITE** THE PLAYBOOK?

A SQL Case Study on Performance Variance (2018-2019)

Presented by: Rudrack Dey | Data Analyst

KINGS XI PUNJAB DOMINATED THE 2019 SCORING

SKILL: DATA AGGREGATION

By aggregating run totals across the entire roster, we see that Kings XI Punjab established a significant offensive lead in 2019.

```
SELECT Team, sum(Runs) as total_runs
FROM `ipl_analysis.2019_batsmen`
GROUP BY Team
ORDER BY total_runs DESC
LIMIT 1;
```

SQL QUERY

Finding: A highly concentrated top-order led to 2,000+ team runs.

RISHABH PANT: THE BOUNDARY KING OF 2018

SKILL: METRIC ENGINEERING

105

TOTAL BOUNDARIES

In 2018, Pant hit more 4s and 6s combined than any other player, demonstrating extreme scoring efficiency.

To find the most aggressive player, I engineered a "Total Boundaries" metric by summing separate columns for Fours and Sixes.

SQL QUERY

```
SELECT Player, (sum(`4s`) + sum(`6s`)) as boundaries
FROM `ipl_analysis.2018_batsmen`
GROUP BY Player
ORDER BY boundaries DESC
LIMIT 1;
```

K.L. RAHUL: THE **CONSISTENCY** ANCHOR

The most difficult question: Who performed best **across both** seasons? This required an `INNER JOIN` to isolate players present in both years.

1,252

TOTAL RUNS (18-19)

```
SELECT p.Player, (p.Runs + a.Runs) as total_runs
FROM `ipl_analysis.2019_batsmen` as p
INNER JOIN `ipl_analysis.2018_batsmen` as a
ON p.Player = a.Player
ORDER BY total_runs DESC
LIMIT 1;
```

SQL QUERY

Recruiter Note: Demonstrates ability to handle longitudinal data and cross-table normalization.

RASHID KHAN: DEFENSIVE EXCELLENCE

SKILL: ADVANCED FILTERING

Isolating "Efficiency Leaders" requires multi-criteria filtering. I looked for bowlers with an Economy Rate under 7.0 who also led in wickets.

- **Metric:** Economy Rate (E_R)
- **Benchmark:** < 7.00
- **Result:** Rashid Khan (6.74 ER)

SQL QUERY

```
SELECT Player, Team, Wkts, E_R  
FROM `ipl_analysis.2018_bowlers`  
WHERE E_R < 7  
ORDER BY Wkts DESC;
```

2019's MOMENTUM SHIFTERS (4-WKTS)

SKILL: EXCEPTION REPORTING

PLAYER	TEAM	4-WKT HAULS
A.J. Tye	Kings XI Punjab	3
L. Ngidi	CSK	1

Identifying "Clutch" performers using frequency thresholds. This query filters for players who had at least one match-defining 4-wicket haul.

SQL QUERY

```
SELECT Player, Team, four_wickets
FROM `ipl_analysis.2019_bowlers`
WHERE four_wickets > 0;
```
